Xingyu Pan

pxy1999799@gmail.com | Beijing Normal University, Zhuhai, China

EDUCATION

PhD Student in Psychology (Cognitive Neuroscience)

Beijing Normal University, Sep 2025–present | Supervisor: Dr. Jing Huang

Research focus: bidirectional interactions between action and cognition.

MSc in Psychology (Cognitive Neuroscience)

Beijing Sport University, Sep 2022–Jun 2025 | Supervisor: Prof. Yu Zhang | GPA 3.6/4.0

BSc in Management

China Agricultural University, Sep 2017–Jun 2021 | GPA 3.19/4.0

RESEARCH EXPERIENCE

Visuomotor Integration and Visual Working Memory

Dr. Jing Huang's Research Group, 2025–present

- Developed a project testing whether visuomotor functioning moderates the relationship between physical activity and visual working memory; completed robust regression and moderation analyses and submitted a first-author manuscript.

TMS–EEG Investigation of Visual Working Memory

Dr. Jing Huang's Research Group, 2025–present

- Designed online TMS and concurrent TMS–EEG studies targeting right posterior parietal and primary motor cortices during a retro-cue working-memory task.

Neural Mechanisms of Perceptual Learning and Transfer

Dr. Jing Huang's Research Group, 2025–present

- Applied time–frequency analysis and tensor decomposition to EEG data; led a first-author manuscript and presented the work orally at the Joint ESCoP–CoPM Meeting 2026.

Attentional Allocation in Cooperative Tasks Among Athletes

Prof. Yu Zhang's Research Group, 2022–2025 | Master's thesis

- Developed a dyadic tracking paradigm and conducted fNIRS hyperscanning analyses of functional connectivity and inter-brain synchrony.

Goal-Directed Attention in Dynamic Visual Tracking

Research team member, 2022–2023

- Contributed to eye-tracking experiments examining gaze strategies during goal-directed visual tracking.

HONORS AND AWARDS

- First-Class Entrance Scholarship, Beijing Normal University, 2025.
- Graduate Research Excellence and Innovation Program, Beijing Sport University, 2024. Project lead.

RESEARCH AND TECHNICAL SKILLS

- **Data acquisition:** EEG, eye tracking, fNIRS hyperscanning
- **Data analysis:** ERP, time–frequency analysis, tensor decomposition, eye movement analysis, functional connectivity, inter-brain synchrony
- **Programming:** MATLAB, R, JavaScript
